Dear AMSAT Supporter:

There are just two ways to make a QSL card stand out:

1. You can make it gaudy, or,

2. You can make it simple but elegant.

We've chosen simple elegance!

If ever a picture spoke volumes, this QSL intones very special things about its owner. Most of all, it says its sender is a solid AMSAT supporter. It connotes the stark adventure we know as part of the "Hams In Space" theme.

We've combed the archives for photo images that would convey just that feeling because we know you want to share that spirit with others through your QSL.

As you see, the face of the QSL is clean, pure and simple. At once you get the notion of space adventure. And, your callsign appears unobtrusively in this important context.

The NASA, Apollo 16 Earth image appears in conjunction with an AMSAT DL Phase III photo. The kick motor points to the upper right. Since the flat-black 2 meter antennas don't show up against the blackness of space, what results is a technically correct orientation of Phase III with respect to Earth. The "holes" in the clouds just to the left of the "swirl" are Lakes Superior and Michigan.

The QSL data section is kept simple also but is especially optimized for satellite QSOs. The RS (T) portion is eliminated from the formal data but may be added by those who still require this data. There is also a space on the back for stick-ons indicating, if you wish, club affiliations and awards.

We strongly believe the distinctive nature of this QSL is in keeping with the distinguished interests of our ardent supporters. Will I soon see your QSL on my wall?
